

Pattern 60 Genes Highlighted by GO

GO Term

- response to topologically incorrect protein
- response to unfolded protein
- unfolded protein binding
- chaperone cofactor-dependent protein refolding
- 'de novo' protein folding
- protein folding chaperone
- protein refolding
- 'de novo' post-translational protein folding
- cellular response to topologically incorrect protein
- fat cell differentiation
- DNA-binding transcription activator activity, RNA polymerase II-specific
- DNA-binding transcription activator activity
- chaperone-mediated protein folding
- cellular response to unfolded protein
- DNA-binding transcription repressor activity, RNA polymerase II-specific
- ATP-dependent protein folding chaperone
- DNA-binding transcription repressor activity
- transcription corepressor activity
- skeletal muscle cell differentiation
- muscle tissue development
- DNA-binding transcription factor binding
- protein-folding chaperone binding
- heat shock protein binding
- integrated stress response signaling
- transcription regulator complex
- response to heat
- negative regulation of cell differentiation
- apoptotic signaling pathway
- cell fate determination
- cholesterol biosynthetic process
